Overview

It's that time of year again to complete the annual National Critical Access Hospital (CAH) Quality Inventory and Assessment. This assessment helps us learn more about CAH quality improvement (QI) infrastructure and activities, service lines offered, and related quality measures. The Assessment gathers a wealth of information on QI processes from CAHs in a standardized manner, in order to enhance support to CAHs in quality improvement activities. Join us to learn more about updates to this year's assessment.

Objectives

1. Learn about the background of the National CAH Quality Inventory and Assessment
2. Understand the components of the Assessment
3. Identify next steps for completing the Assessment

Speaker

Megan Lahr, MPH

Megan is a Senior Research Fellow at the University of Minnesota Rural Health Research Center (RHRC) and is Principal Investigator of the Flex Monitoring Team. Megan's work with the Flex Monitoring Team focuses on quality of care and best practices in Critical Access Hospitals, as well as quality improvement and quality measurement data analyses related to the MBQIP program. She has also completed research in access to care for rural individuals, rural caregiving, LGBTQ health, housing in rural communities, and health care and support services for older adults in rural communities.

Audience: Quality Professionals
